

Get Unlimited Connectivity With Our Advanced Multi-network Solution

FASTEST INTERNET SPEED • PRIORITIZED DATA • GLOBAL COVERAGE

Custom Solutions From 100Mbps to Multiple Gbps Bandwidth

AT LAST, INTERNET CONNECTIVITY THAT JUST WORKS... AND STAYS COST EFFECTIVE

- Multiple GEO & LEO satellite constellations and 5G & 4G/LTE wireless networks
- Multi-network approach enables the best onboard internet connectivity, mirroring an at-home internet experience
- Our advanced and efficient SD-WAN network solution delivers: greater coverage, faster bandwidth speeds, higher-capacity broadband and the most competitive pricing

THE NETWORK OF THE FUTURE HAS ARRIVED

Enjoy the next generation of network connectivity, delivered via our converged connectivity solutions for true broadband and M2M applications. Our proprietary operating platform provides custom connectivity solutions enabling worldwide coverage on GEO, MEO and LEO Satellites and 5G, 4G/LTE wireless networks in more than 210 countries – all integrated within a single platform, compatible and future-proof with the emerging LEO satellite broadband networks.

5G WIRELESS & LEO/GEO SATELLITE CONNECTIVITY

Upgrading yachting connectivity through 5G & LEO/GEO Satellite, allows for plans customized and tailored to your specific needs. Our worldwide network solutions provide true broadband bandwidth to ensure the fastest internet speeds with no throttling for all type of yachts. Ideal for guest and crew wi-fi, video streaming, IPTV, social network applications, photo & video uploads, video-conferencing, anytime, anywhere in-port or while-sailing. Optimum SD-WAN and secure data solutions for short and long-term charters.

WORLDWIDE COVERAGE

210 countries covered, up to 40 miles off-shore on 4G & 5G wireless networks, with global satellite coverage through multiple satellite providers, all integrated into our 5G/LTSAT™ platform with 99.99% uptime.

SATELLITE VSAT

From a few Mbps to Gbps bandwidth, our solution is LEO ready and connects to 85 HTS satellites on Ku-Band. Enjoy our software steered flat-panel VSAT technology.

CUSTOM SOLUTIONS

Most cost-effective data solution with tailored data plans and managed network services. Let us perfectly size your local network to fit your connectivity needs and budget.

RELIABLE WI-FI

Now access Gbps bandwidth – no throttling and best guest Wi-Fi experience. IMO 2021 compliant; our network provides cyber security with: enterprise-grade encryptions; static IPs; SD-WAN; direct VPN; MPLS, and other network tunnels.

UNLIMITED VOIP CALLS

VoIP phone includes local number, unlimited calling to 46 countries, voicemail, and conferencing calling with meeting up to 50 participants per phone.

24/7 CUSTOMER SUPPORT

Dedicated engineers across the globe for all your managed network services. Our proprietary web portal and APIs enable complete visibility into system usage and statistics.

COMPREHENSIVE GLOBAL COVERAGE

- Network Sizing: Seamless switching, accommodates 100's to 1000's simultaneous users, mirrors home Wi-Fi experience
- LEO satellite operator constellations and GEO satellite operator's constellations representing over 200 satellites on Ku-Band with 690 wireless partners worldwide in over 210 countries
- Multiple networks and multiple satellite constellations: failover, out-of-band management, and redundancy
- No throttle, no wireless roaming fee and our most advanced SD-WAN integration

BENEFITS OF STARLINK LEO SATELLITES

OPTICAL SPACE LASERS

InterSatellite links allow for truly global coverage, eliminating the need for local ground stations to transmit data.

COMPACT FLAT PANEL DESIGN

Allows for high-speed, low latency internet coverage worldwide.

STAR TRACKER TECHNOLOGY

Determines each satellite's exact location, allowing for the most precise broadband throughput.

Founded in 2017 and headquartered in Florida – USA, FMC GlobalSat is a global provider of best-in-class satellite and wireless solutions to businesses that require reliable, secure, and cost-effective broadband and M2M connectivity solutions.

FMC GlobalSat has pioneered the delivery of converged connectivity solutions on a global scale, by partnering with major wireless carriers and satellite communications providers that incorporates 5G wireless solutions across CDMA, GSM, and LTE networks and high-throughput satellite (HTS) communications. Our networks incorporate Tier 1 carriers, and satellite infrastructure that includes dozens of satellites, teleports and a 24/7 enterprise-grade global technical support organization which enable us to provide SD-Wan, direct VPN, MPLS and other network tunnels while optimizing data traffic routes.
